Laxmi Prasad Dooda

Site Reliability Engineer

Hyderabad, India | +91-7702932805 | doodalakshmiprasad@gmail.com | LinkedIn | GitHub

Summary

Site Reliability Engineer with **4.8+ years** of enterprise experience operating, automating, and architecting mission-critical platforms across hybrid **AWS, Azure**, and on-premises environments. Proven track record operating regulated healthcare streaming platforms under a **99.95% peak availability SLA**, reducing incident triage time by ∼**70%** through serverless event automation, and driving down overall MTTR by **35%** via full-stack observability (**Prometheus, Grafana, Dynatrace, Splunk**). Experienced designing modular **Terraform IaC**, engineering zero-toil Python sentinels, executing multi-region **disaster recovery drills**, and pioneering AI-augmented operational diagnostics.

Technical Skills

Programming & Scripting: Python (Boto3, Requests, MSAL, Concurrency, Systems Automation), Bash, PowerShell, REST APIs, JSON/YAML
Cloud Platforms & Reliability: AWS (EC2, S3, Lambda, SQS/DLQ, EKS, CloudWatch, VPC), Azure (VMs, Functions, Entra ID, Traffic Manager), Linux (RHEL)
Infrastructure as Code & Configuration: Terraform (Modular IaC, S3 Remote State, DynamoDB Locking, Drift Detection), Ansible (Playbooks, Hardening)
Containers, Orchestration & CI/CD: Kubernetes (CNCF Architecture, Workload Hardening, RBAC, HPA/PDB), Docker (Multi-Stage Builds, Trivy), GitHub Actions
Observability, Telemetry & APM: Prometheus & Grafana (PromQL, Multi-Window Burn SLOs), Splunk (HEC, Log Analytics), Dynatrace (PurePath APM)
Operations, Incident Response & AI SRE: 24/7 Incident Command, ServiceNow (P1/P2 Major Incidents, Blameless RCA), BMC Control-M, Claude Code CLI, MCP

Professional Experience

Tata Consultancy Services (TCS) Jan 2022 – Present
Site Reliability Engineer *Hyderabad, India*

- **Operated Healthcare Streaming Platform (99.95% SLA):** Operated the mission-critical Medicare and Medicaid enrollment platform across hybrid AWS and on-prem systems, maintaining **99.95% availability** during 3–5× open-enrollment traffic spikes; engineered resilient pipelines across Amazon S3, AWS Lambda, Kafka, and Redis caching with zero data loss.
- **Implemented Automated Incident Triage (∼70% Faster):** Implemented a serverless Python event pipeline (Azure Monitor, Splunk HEC, ServiceNow) with real-time KQL parsing and CMDB enrichment, reducing high-severity P1/P2 incident triage time by ∼**70%** and eliminating manual portal polling.
- **Operated Full-Stack Observability & Cut MTTR by 35%:** Standardized enterprise telemetry across cloud and on-prem systems: deployed **Dynatrace** PurePath APM across middleware services, established **Prometheus & Grafana** container SLIs/SLOs, and centralized Splunk log analytics, reducing overall on-call MTTR by **35%**.
- **Designed Zero-Downtime Deployment & Draining Protocols:** Designed deterministic load-balancer connection draining protocols (120s windows) and pre-flight health gates across distributed WebLogic/IIS clusters, eliminating in-flight transaction drops; triaged automated Linux kernel patch cycles and authoring post-patch validation gates.
- **Implemented Proactive Entra ID / SPN Expiration Sentinel:** Implemented an autonomous Python sentinel utilizing MSAL and Microsoft Graph API with tiered alert thresholds (45/30/15/7-day), eliminating **100% of credential-expiry outages** across 500+ enterprise application registrations.
- **Designed & Validated Multi-Region Disaster Recovery (DR):** Designed and spearheaded multi-region DR drills using Azure Traffic Manager priority routing and SQL Failover Groups, validating **RTO** $<$ **30m** and **RPO** $<$ **5m**; maintained daily enterprise batch pipelines orchestrated through **BMC Control-M** and automated SSL/TLS renewals.
- **Implemented Modular Terraform IaC & CI/CD Delivery:** Implemented production **Terraform** modules with remote S3 state and DynamoDB locking to provision zero-trust VPC and compute topologies; established automated **GitHub Actions** deployment pipelines embedding security linting and zero-drift delivery.
- **Engineered AI-Augmented SRE Diagnostics & Container Hardening:** Engineered hardened multi-stage Docker builds reducing image footprints from 850MB to 161MB with zero critical CVEs; pioneered the integration of **Claude Code CLI** and Model Context Protocol (MCP) tooling to automate operational diagnostics and RCA drafting.

Education

Bachelor of Technology in Mechanical Engineering 2017 – 2021
Jawaharlal Nehru Technological University *Kakinada, India*
